DELIVERY MODE

09/04/2007

PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/817,583	<b>Applicant(s)</b> WEIGERT, MARTIN	
	<b>Examiner</b> Thomas L. Dickey	<b>Art Unit</b> 2826	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 20 June 2007.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-8, 10, 11 and 13-15 is/are pending in the application.
- 4a) Of the above claim(s) 11 is/are withdrawn from consideration.
- 5) ☒ Claim(s) 14 and 15 is/are allowed.
- 6) ☒ Claim(s) 1-4, 8 and 13 is/are rejected.
- 7) ☒ Claim(s) 5-7 and 10 is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 02 April 2004 and 03 February 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2826

## DETAILED ACTION

1. Applicant's 06/20/2007 response is acknowledged. No claims have been cancelled, amended, or added.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

A. Claims 1-4 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over BARMET (2002/0139289) in view of HEO ET AL. (2004/0108809)

Barmet discloses an arrangement comprising an optoelectronic component (TFEL) 2 comprising an optical window (described in paragraph 0028 as a "transparent ITO film" formed over an "active layer" of "EL pigments") for light to enter or light to leave the optoelectronic component 2; a printed circuit board 13 with electrical contacts (not supplied with part #s in the figures but described at paragraph 0031), and a flexible conductor arrangement (or "tongue," as Barmet calls it) 10 of a planar form and including a plurality of interconnects 11, where the flexible conductor arrangement 10 has contact

Art Unit: 2826

regions connected to the electrical contacts of the printed circuit board 13 and a second portion with contact regions connected to the optoelectronic component 2 (so that interconnects 11 electrically connect the optoelectronic component 2 and corresponding electrical contacts of the printed circuit board 13), the flexible conductor arrangement 10 being bent at least in a third portion having at least one region of maximum curvature maximum with a bending radius which is equal to or greater than a minimum bending radius and lying between the first portion and the second portion, wherein the flexible conductor arrangement 10 is bent in such a way that, starting from the printed circuit board 13, the flexible conductor arrangement 10 is led around the optoelectronic component 2 and contacts the optoelectronic component 2 on a side facing away from the printed circuit board 13; the optical window being arranged on said side of the optoelectronic component 2 facing away from the printed circuit board 13 and the flexible conductor arrangement 10 defining an opening (formed in frame 5) through which light can enter and leave. Note figure 3 and paragraphs 0030-0031 of Barmet.

Barmet discloses, note paragraph 0028, that his optoelectronic component 2 includes electrodes required to transmit electricity through its active (light-emitting) layer portion. Although one having skill in the EL art would have recognized, from the nature of the problem to be solved (transmitting electricity through the active, light emitting portion of optoelectronic component 2) that these electrodes would require connections

Art Unit: 2826

(i.e. terminal contacts) with interconnects 11, it cannot be stated that Barmet unequivocally discloses that the optoelectronic component includes terminal contacts connected to the contact regions of the plurality of interconnects. With regard to claim 8, Barmet plainly does not disclose a lead frame for contacting purposes, wherein the respective contact regions of the second portion of the flexible conductor arrangement are each electrically connected to a corresponding leg of the lead frame.

However, Heo et al. discloses an arrangement comprising an optoelectronic component 50 including electrodes 52-54 like those Barmet disclose within his optoelectronic component. Like Barmet, Heo et al. disclose an optoelectronic component that is an EL electroluminescent display. Unlike Barmet, Heo et al. discloses their optoelectronic component has multiple sections (pixels) capable of being independently turned on and off (addressed). Barmet's EL displays a "B" (for example) that may be lighted or not, no other options are available under Barmet. On the other hand Heo et al.'s addressable EL is capable of, for instance, displaying a "U" when Barmet's elevator is going up and a "D" when Barmet's elevator is going down. In Heo et al.'s device, terminal contacts 62-64 are available for connecting internal electrodes 52-54 to a flexible printed circuit board 43 having a plurality of interconnects and arranged in a lead frame 60 for contacting purposes. Respective contact regions of flexible printed circuit board 43 may be each electrically connected to corresponding

Art Unit: 2826

legs 62 and 64 of the lead frame 60. Note figure 5 and paragraphs 0051-0056 of Heo et al.

Therefore, it would have been obvious to a person having skill in the art to augment Barmet's arrangement with the terminal contacts connected to the contact regions of the plurality of interconnects and lead frame for contacting purposes such as taught by Heo et al. One would have been motivated to make this modification in order to, in the first instance, transmit electricity (as required by the nature of the problem posed by Barmet) to the electrodes attached to Barmet's active layer; and in the second instance, improve on the Barmet design by providing a lead frame including a large number of separate terminal contacts for independently transmitting electricity to large number of separate electrodes attached to a large number of independently addressable pixels to thus use a modified version of Barmet's arrangement for displaying different information on the same optoelectronic component at different times, as needed.

**B.** Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over BARMET (2002/0139289) in view of HEO ET AL. (2004/0108809), as applied to claim 1, and further in view of DAVIS ET AL. (5,387,125).

Barmet and Heo et al. suggest an arrangement having all the limitations of claim 13 except the limitation that the flexible conductor arrange its plurality of interconnects in a flexible dielectric. Note figure 5 and paragraphs 0051-0056 of Heo et al.

Art Unit: 2826

However, Davis et al. discloses a flexible conductor 1 arranging its plurality of interconnects 2 in a flexible dielectric 3. Note figure 1, column 1 lines 23-30, and column 2 lines 26-34 of Davis et al. It should be noted that column 1 lines 23-30 in particular point out the advantages accruing from the use of Davis et al.'s flexible dielectric embedding a plurality of interconnects. Therefore, it would have been obvious to a person having skill in the art to arrange the plurality of interconnects of Barmet's flexible conductor in the flexible dielectric taught by Davis et al. in order to provide numerous conductor traces in a small space, to thus create a better means for making numerous parallel conductor traces connected to high density electronic circuits (such as the multi-pixel display device disclosed by Heo et al.) in an electronic device.

***Allowable Subject Matter***

3. Claims 14 and 15 are allowed over the references of record for the reasons set forth by Applicant in his paper of 2/3/2006.
4. Claims 5-7 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2826

***Response to Arguments***

5. Applicant's arguments filed 06/20/2007 have been fully considered but they are not persuasive.

At page 2 of the remarks, Applicant asserts, "Currently pending independent claims 1 and 3 recite in part that 'the flexible conductor arrangement defines an opening through which light can enter or leave, the opening defined opposite the optical window.'" This is quite true. Applicant then asserts, "Thus, claims 1 and 3 require that the flexible conductor itself define an opening that is opposite the optical window." Applicant's second assertion does not, however, necessarily follow from his first.

The claims require an arrangement that defines an opening through which light can enter or leave, the opening defined opposite the optical window. Said arrangement is characterized as a "flexible conductor arrangement;" however, there is a world of difference between a simple "flexible conductor" and a "flexible conductor arrangement."

The claimed "flexible conductor arrangement" must be construed as something more than just a flexible conductor, otherwise the word "arrangement" would be superfluous. A basic rule of construction is that every word be given effect, if possible. See, e.g. *Genentech Inc. v. Eli Lilly and Co.*, 27 USPQ2d 1241,1248 (Fed. Cir. 1993). It would be

Art Unit: 2826

improper not to seek out the meaning of the word "arrangement," within the claim, and give that meaning full effect.

The claims use the word "arrangement" as a noun. In context the word appears to mean "a collection of things that have been arranged," (see "arrangement" (2003), in The American Heritage® Dictionary of the English Language, retrieved August 26, 2007, from <http://www.credoreference.com/entry/4062440>) or "something made by arranging constituents or things together," or perhaps "the way in which they [constituents or things] are arranged" (alternate definitions from The Penguin English Dictionary, retrieved August 26, 2007, from <http://www.credoreference.com/entry/1120644> arrangement. (2000)). In the claims, therefore, it is this arrangement, or "collection of things," that "defines" an opening, opposite the optical window, through which light can enter or leave. Alternately it is the way in which a group of constituents are arranged that defines said opening.

Further, the claims, as written, include no limitation of a hole or opening actually being formed in the flexible conductor itself. The arrangement (which is characterized by a "flexible conductor" but not identical therewith) must simply define (by virtue of what it is or how it is put together) an opening. Applicant discloses one embodiment, note figure 1 and paragraph 0039 of the application, wherein "a schematically represented clearance 34" appears to pierce flexible conductor 3 to allow light to enter or leave

Art Unit: 2826

optical window 12a opposite laser diode 14. However, it would be an error to limit Applicant's claims to a particular disclosed embodiment. See, e.g., *Phillips v. AWH Corp.*, 75 USPQ2d 1321, 1334 (Fed. Cir. 2005) ("In particular, we have expressly rejected the contention that if a patent describes only a single embodiment, the claims of the patent must be construed as being limited to that embodiment. *Gemstar-TV Guide*, 383 F.3d at 1366. That is not just because section 112 of the Patent Act requires that the claims themselves set forth the limits of the patent grant, but also because persons of ordinary skill in the art rarely would confine their definitions of terms to the exact representations depicted in the embodiments").

Barnet discloses an arrangement, characterized by flexible conductor 10, which "defines" an opening an opening through which light can enter or leave, the opening defined opposite an optical window. The opening, as the Examiner has previously pointed out, is formed in frame 5. However, there is no limitation in Applicant's claims, as written, that prohibits this arrangement.

### ***Conclusion***

**6. THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2826

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

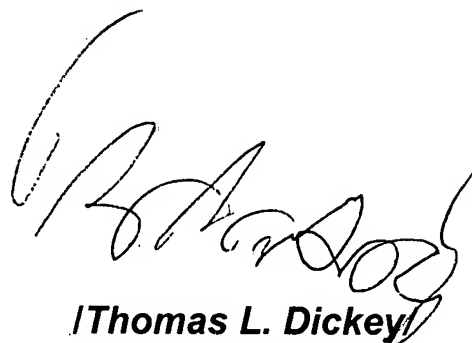

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas L. Dickey whose telephone number is 571-272-1913. The examiner can normally be reached on Monday-Thursday 8-6.

If attempts to reach the examiner by telephone are unsuccessful, please contact the examiner's supervisor, Sue A. Purvis, at 571-272-1236. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you
